

ABSTRACT

Title: Mobile Computer and Base station

- 5 A control element for a mobile computer and a base station operable to functionally interact with the mobile computer, the control device being operable to;
- detect when a mobile computer is interacting with the base station, and cause the mobile computer to perform a transition from an operating state to a
- 10 sleep state,
- wherein the mobile computer saves system context information when performing the transition,
- and wherein the control element is operable to cause the base station to perform a transition to an operating state in accordance with the system context
- 15 information.
